NEXT STEP**

NASA Jack Eddy Postdoctoral Fellowships 2023

**These fellowships are designed to train the next generation
of researchers in the emerging field of heliophysics.**

Heliophysics embraces all aspects of the Sun–Solar System, and includes many of the basic physical processes found in the laboratory, the solar system, and throughout the universe. These processes generally involve the interactions of ionized gases (plasmas) with gravitational and electro-magnetic fields, and with neutral matter. The physical domain of heliophysics ranges from deep inside the Sun to the Earth’s upper atmosphere.
